Introducing CareFlex

SPECIALIST SEATING SINCE 1995

We work alongside health and social care professionals to develop and deliver specialist seating that supports posture, pressure care, comfort and independence in everyday life.

Made with care in Devon. Bringing comfort globally.

Our experienced team combines expert craftsmanship with precision manufacturing to create high-quality seating solutions. Every chair is made to order and carefully inspected throughout production, helping to ensure exceptional standards of safety, durability and performance.

With you from assessment

We offer free seating assessments and product demonstrations, supporting health and social care professionals from initial assessment through to provision. Our team can provide guidance on product selection, configuration, chair set-up and ongoing review, helping to ensure the seating solution continues to meet the individual's clinical and functional needs as they evolve.

Built around the individual

Every assessment starts with the person: their posture, pressure risk, daily activities and goals. Our adjustable range, optional accessories and Tailored Solutions service help translate those needs into an effective seating prescription.

Knowledge you can use

Clinical resources, webinars, study days and training opportunities support health and social care professionals in developing their understanding of seating, posture and pressure care. By strengthening clinical reasoning and promoting best practice, these learning opportunities help support informed decision-making and provide confidence when making seating recommendations.

Benefits of Choosing CareFlex

CareFlex specialist seating is designed to support effective postural care and comfort while enabling a personalised approach to seating provision.

Through a combination of adjustability, specialist features and clinical support, health and social care professionals can prescribe solutions aligned to assessment findings, functional requirements and individualised goals.

Made-to-order manufacturing, combined with expert assessment support, provides confidence that each seating solution is tailored to the unique needs of the individual.

By balancing clinical functionality with everyday usability, CareFlex seating can promote comfort, independence and engagement in daily life.

AlphaCare II®

STABILITY AND SECURITY

For individuals whose significant movements and postural instability make a secure, comfortable sitting position difficult to achieve.

Clinical outcome

The enhanced stability achieved with the AlphaCare II led to a reduction in Duncan's support needs, with his clinical team reporting that one-to-one observations were no longer required.

Designed to support

- Security in sitting
- Pelvic stability and sensory feedback
- Comfort and protection during movement
- Supported engagement

When to consider AlphaCare II

When significant movements, limited trunk control or cognitive impairment compromise stability and safety in sitting.

Support that feels secure

Linked positioning and protective contours help the individual settle comfortably.

Linked seat and back recline
The seat angle changes as the back reclines, helping maintain pelvic support during repositioning.

Contoured back support
Gentle lateral support encourages a midline position while allowing active movement.

Protective curved arms
Padded contours provide lateral feedback and help protect the upper limbs.

EasySecure block leg rest
Supports the lower limbs, with quick release at the push handle for removal during transfers and activities.

Comfort at contact points
Reflexion® foam redistributes pressure across the seat and leg rest. An optional WaterCell Technology® seat cushion offers further pressure care.

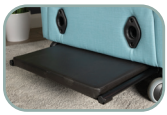

Built for significant movement
Robust construction supports demanding movement patterns, with optional heavy-duty upholstery for greater resistance to wear.

Personalise the support

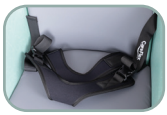

SecureFit head supports

Padded sliding footplate

Castor options

Positioning aids

Seat width (mm)	Seat depth (mm)	Seat height (mm)	Max. user weight	
380 or 440	**470**	**485**	**100 kg**	with 75 mm castors
380 or 440	**470**	**520**	**160 kg**	with standard castors

EasiTilt®

MILD TO MODERATE SUPPORT

For individuals who need more postural support than a standard armchair or rise and recline chair provides.

Clinical outcome

"This chair has been life changing. Mark has been able to sit to eat for the first time in over two years."

Natalie, Physiotherapist

Designed to support

- Pelvic stability
- Pressure redistribution
- Fatigue management
- Easier repositioning

When to consider EasiTilt

Forward sliding, lateral leaning, fatigue in sitting or an increasing need for help with repositioning may indicate a need for more support.

Configured for the individual

Meaningful adjustability for everyday support.

Tilt-in-Space

Tilts the seating system while maintaining the relationship between the pelvis, trunk and lower limbs.

Individual fit

Adjustable seat width and depth help establish a stable base of support. Fixed 100° back angle for stability.

Pressure redistribution

Reflexion® foam as standard. Optional WaterCell Technology® or a docking cushion for a prescribed alternative.

Lower limb support

Elevating and negative-angle leg rest, plus an angle-adjustable flip-up footplate.

Transfer-Assist arms

Removable arms support side transfers, sling application, cleaning and maintenance.

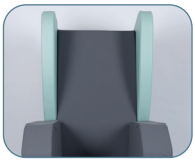

Choice of control

Manual or motorised adjustment of Tilt-in-Space and leg rest elevation to suit the individual and care setting.

One chair. Five back options.

Open Back

Winged Flat

Winged Waterfall

Winged Contoured

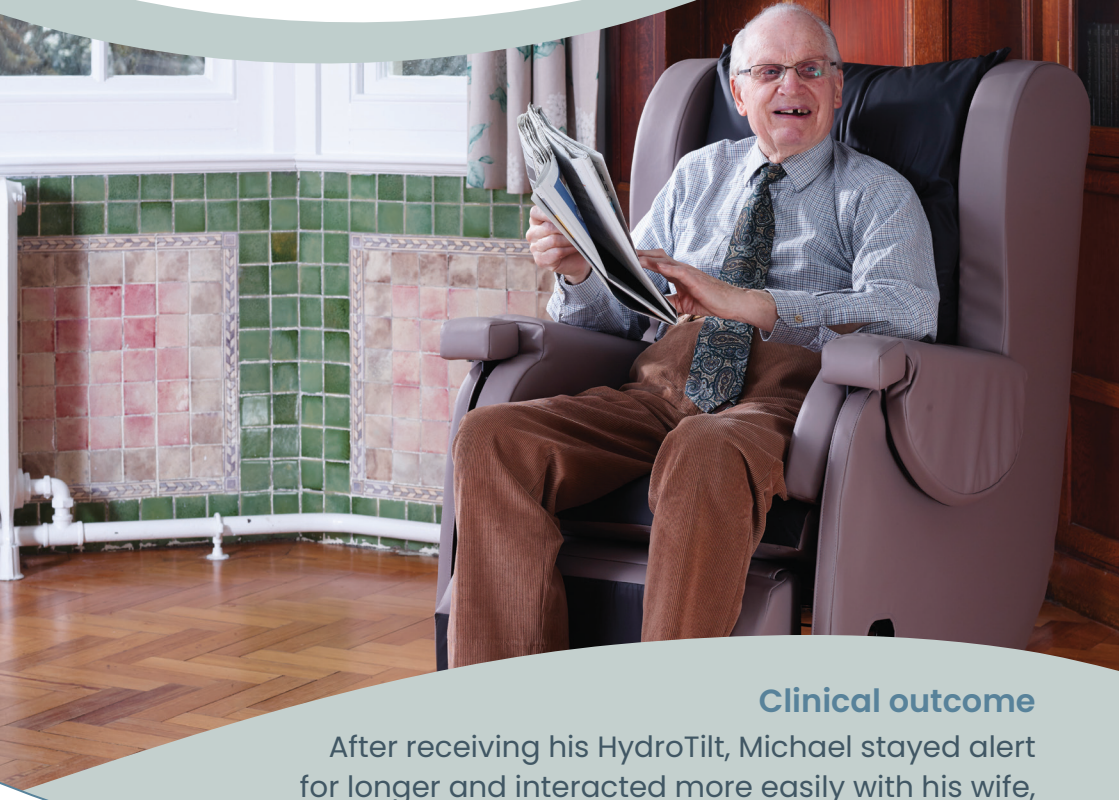

Winged Cocoon

Seat width (mm)	Seat depth (mm)	Seat height (mm)	Max. user weight
400-500	**400-560**	**520**	**160 kg**

HydroTilt®

MILD TO MODERATE SUPPORT

For individuals who need postural support and pressure care in equal measure, with dependable comfort for everyday sitting.

Clinical outcome

After receiving his HydroTilt, Michael stayed alert for longer and interacted more easily with his wife, enjoying time listening to music together again.

Designed to support

- Sitting tolerance
- Pelvic stability
- Pressure redistribution
- Everyday engagement

When to consider HydroTilt

When prolonged sitting, reduced mobility or postural changes affect comfort, pressure care and participation in daily life.

Posture, pressure and comfort in balance

Individual set-up and supportive positioning for activity and rest.

WaterCell Technology®
Integrated pressure care in the seat and backrest helps distribute body weight while supporting a comfortable, stable posture.

Adaptable fit
Adjustable seat depth and interchangeable arm cushions allow dimensions to match the individual's proportions.

Tilt-in-Space
Supports pelvic stability and periods of rest without changing hip and knee angles.

Choice of back support
Flat, Contoured or Waterfall backs, with optional adjustable laterals, help match support to trunk positioning.

Lower limb support
An elevating, negative-angle leg rest accommodates restricted knee movement. The adjustable footplate supports the feet and flips away for transfers.

HydroTilt XL

Support for greater body weight and size.

For individuals requiring wider seating and a weight capacity of 220 kg. Powered Tilt-in-Space and four heavy-duty braked castors support positioning and manoeuvrability.

Size	Seat width (mm)	Seat depth (mm)	Seat height (mm)	Max. user weight
Mini/Small	**280/330/380/430**	**310-430**	**355/380/405/430**	**75 kg**
Medium	**350/400/450/500**	**380-530**	**520**	**160 kg**
Large	**550/600**	**380-530**	**520**	**160 kg**
XL	**600/650**	**380-530**	**520**	**220 kg**

MultiAdjust®

MILD TO MODERATE SUPPORT

For individuals who need adaptable postural support as their needs change, with practical flexibility for carers and equipment providers.

Clinical outcome

Barry's care team reported less agitation, greater willingness to sit out and improved sitting tolerance, giving him a comfortable alternative to his wheelchair.

Designed to support

- Individual set-up
- Daily activity
- Pressure redistribution
- Long-term adaptability

When to consider MultiAdjust

Changing posture, weakness or fatigue may call for seating that can be readily adjusted, reconfigured and reissued.

Adapt today, reconfigure tomorrow

Tool-free adjustment and modular components support the individual and the service.

Tool-free set-up
Adjust seat width, depth and arm height to establish a stable, comfortable base for everyday activity.

Flexible positioning
Tilt-in-Space and Back Angle Recline allow changes of position for activity, rest and fatigue management.

Accessible transfers
Removable arms and hoist-compatible clearance facilitate side transfers and sling application.

Support through growth
The Small chair offers four factory-set seat heights and two back heights, with further adjustments possible by a technician.

Ready for reissue
Removable upholstery and interchangeable parts for easy refurbishment and reuse.

Adaptable arm support
Independent arm positioning supports the upper limbs and can assist individuals who push up to stand.

One chair. Three back options.

Flat

Contoured

Waterfall

Flat Back and Reflexion® foam seat cushion as standard. Optional back upgrades and WaterCell Technology®.

Size	Seat width (mm)	Seat depth (mm)	Seat height (mm)	Max. user weight
Small	**330-480**	**320-490**	**380/405/430/455**	**100 kg**
Medium	**400-550**	**380-550**	**540**	**160 kg**

MultiAdjust® Advance

MODERATE TO COMPLEX SUPPORT

Adaptable seating for adults who need more support for the head and spine, with intuitive adjustment as postural needs change.

Support for head posture

An articulating head section with Flat or Waterfall support accommodates altered head position and increased thoracic kyphosis.

Choice of back support

Flat, Waterfall or Contoured back supports help match the chair to the individual's spinal posture.

A closer fit, without tools

Adjust seat width, depth and arm height to establish a supported, comfortable sitting position.

Flexible positioning

Tilt-in-Space, Back Angle Recline and WaterCell Technology® support positioning and pressure care.

Access for transfers

Removable arms assist lateral transfers and sling access for hoisting. Choose Transfer-Assist arms for active standing hoist transfers.

When to consider MultiAdjust Advance

Additional head support and pressure care requirements may indicate the need for advanced seating provision.

Seat width (mm)	Seat depth (mm)	Seat height (mm)	Max. user weight
400-500	**380-550**	**540**	**160 kg**

HydroFlex®

COMPLEX POSTURAL SUPPORT

Flexible rehabilitation seating for children and adults with complex postural needs, balancing support, pressure care and participation in daily life.

Position for activity and rest

Tilt-in-Space supports weight redistribution and rest. Back Angle Recline accommodates reduced hip range of movement.

Stability around the head

An articulating back and adjustable head wings provide tailored support for a stable, comfortable head position.

Lower limb alignment

A channelled, elevating leg rest supports leg alignment, while the angle-adjustable footplate supports the feet.

Integrated pressure care

WaterCell Technology® and vapour permeable contact surfaces support pressure management and comfort throughout the day.

Optional lateral supports allow further individual configuration.

When to consider HydroFlex

During neurological or neuromuscular rehabilitation, where adaptable head, trunk and lower limb support is needed alongside pressure management.

Size	Seat width (mm)	Seat depth (mm)	Seat height (mm)	Max. user weight
Small	**280/330/380/430**	**350-500**	**380/410/470**	**100 kg**
Medium	**350/400/450/500**	**380-530**	**500/530/560**	**150 kg**

SmartSeatPro® II

COMPLEX POSTURAL SUPPORT

For individuals with complex postural asymmetry requiring precise support from the pelvis, through the spine, to the head.

Clinical outcome

James' therapy team reported more energy and improved upright sitting after he received his SmartSeatPro II, helping him socialise and enjoy the activities that matter most to him.

Designed to support

- Pelvic stability
- Accommodation of asymmetry
- Head and trunk alignment
- Everyday participation

When to consider SmartSeatPro II

Scoliosis, pelvic rotation, contractures or reduced head control may require support configured around each body segment.

Configured for the individual

Meaningful adjustability for positioning, pressure care and everyday support.

Four-part back and head system
Independently adjustable sections and modifiable padding accommodate spinal asymmetry and complex head positions.

Targeted trunk support
Optional laterals adjust independently in height and width, providing firmer support where needed.

Asymmetric arm positioning
Armrests accommodate different heights and widths, supporting individual upper limb positions and windswept postures.

Guided repositioning
A Tilt-in-Space inclinometer provides a clear visual reference to support seating prescription and safe use.

Integrated pressure care
WaterCell Technology® comes as standard, contouring around the individual to redistribute pressure while maintaining support.

Lower limb alignment
A channelled, elevating leg rest with negative-angle adjustment accommodates restricted knee movement; an adjustable footplate supports the feet.

Personalise the support

Head supports

Swivel-head pommel

Flip-away laterals & flip-down pommel

Tray options

Size	Seat width (mm)	Seat depth (mm)	Seat height (mm)	Max. user weight
Small	**280-440**	**280-490**	**450/480/510/540**	**100 kg**
Medium	**350-550**	**360-570**	**530/560/590/620**	**150 kg**

Accessories

Our comprehensive range of accessories and optional upgrades helps personalise CareFlex seating around individual clinical, postural and functional needs. From positioning supports and pressure-redistributing components to practical everyday features, each option is designed to enhance comfort, stability and independence, while making seating easier to use for individuals and their support network.

Selected through assessment and ongoing review, accessories can be added or adjusted as needs arise or change over time. This flexibility helps ensure seating continues to support posture, pressure care and participation in the activities that matter to the individual.

Our Adaptive Accessories range adds further flexibility for individuals with more complex or changing needs. Available on selected CareFlex chairs, features such as flip-away lateral and head supports and a flip-down pommel combine targeted positioning with easier access for transfers and personal care. These intuitive options help clinicians and carers adapt support around daily routines, promoting comfort and dignity.

Tailored Solutions

Every individual presents with a unique combination of postural, functional and environmental requirements. Where standard product configurations and accessories do not fully meet these needs, the CareFlex Tailored Solutions service offers a more personalised approach.

Working collaboratively with health and social care professionals, CareFlex can incorporate bespoke adaptations to address specific assessment outcomes and complex clinical requirements. Modifications may include adjustments to dimensions, support surfaces, positioning features and other specialist components designed to improve fit, comfort and function.

By extending the flexibility of the CareFlex range, Tailored Solutions helps ensure that seating provision reflects the individual's needs, goals and daily routines.

The result is a seating solution that supports clinical objectives while enabling greater comfort, independence and participation in meaningful daily activities.
